

Indiana State Department of Health

WEEKLY INFLUENZA REPORT

Data as of Wednesday, November 4, 2010

The following report is meant to provide local health departments, hospital administrators, health professionals and residents with a general understanding of the burden of influenza-like illness (ILI). Data from several surveillance programs were utilized to produce this report. Currently, all influenza viruses circulating are not a, “novel” or new virus to humans. Should any changes occur, then enhanced surveillance methods will be implemented and incorporated into this report.

For further information about the data presented in this report, please call the ISDH Surveillance and Investigation Division at 317-233-7125.

Key Points:

- The current percentage of ILI reported by the emergency department surveillance (ED) system (1.01%) and the sentinel surveillance system (.39%) is at or below baseline.
- Data for week 43 was collected from October 24-30, 2010.
- During week 43, 0% (0/0) of specimens that were positive for influenza.
- During week 43, 0 Indiana schools (K-12) reported that their absenteeism rate was 20% or higher.
- Universities and non-university facilities are experiencing similar levels of ILI in their communities.

Percent of patients who presented at an emergency department (ED) with a chief complaint relating to influenza-like illness – Indiana, 20010/11 & 2009/10, 2008/9 seasons, 2006/7 & 2007/8 seasonal averages.*† (EDs currently reporting = 88) Health District-level data is available at the end of this report.

*Data obtained from the ISDH Public Health Emergency Surveillance System (PHESS). The 2008/9 season had a “Week 53” which the 2006/7 and 2007/8 seasons did not have, explaining the break in the seasonal average line.

† PHESS data is very timely, so the data reported is for the most current week.

Key Findings

- The current percentage of ILI reported by the emergency department surveillance (ED) system (1.01) which is at baseline.

Percent of patients who presented at sentinel provider clinics with symptoms relating to influenza-like illness – Indiana, 2010/2011 data vs. 2009/2010, 2008/09, 2006/7 and 2007/8 influenza seasonal averages.*† (Number of sentinel provider clinics who reported this week = 22)

*Data obtained from the ISDH Sentinel Influenza Surveillance System. No data is available for weeks 21-39 during the 2006/7 and 2007/8 seasons due to decreased reporting during traditionally non-influenza months.

† Sentinel data has limited timeliness, so the data reported is for the week before the most current week. This data is subject to change as sentinel sites can back-date their weekly reports.

Sentinel reported influenza-like illness (ILI) by sentinel type and reporting week – Indiana, 2010/11 season.*

**Sentinel data has limited timeliness, so the data reported is for the week before the most current week. This data is subject to change as sentinel sites can back-date their weekly reports.*

Key Findings

- The percent of patients presenting at sentinel providers with ILI is at baseline.
- Universities and non-universities are experiencing similar levels of ILI in their population.
- The percentage of children 0-4 yrs seeking treatment for ILI in sentinel offices increased from 20% to 24% during week 43
- The percentage of people 5-24 yrs seeking treatment for ILI in sentinel offices decreased from 45% to 36% during week 43
- The percentage of people 25-49 yrs seeking treatment for ILI in sentinel offices decreased from 23% to 16% during week 43
- The percentage of people 50-64 yrs seeking treatment for ILI in sentinel offices increased from 7% to 20%.
- The percentage of people 65+ yrs seeking treatment for ILI in sentinel offices decreased from 5% to 4%.
